

Lab 10 Updating with Relationship

NOTE: Use the project from example of week 10.

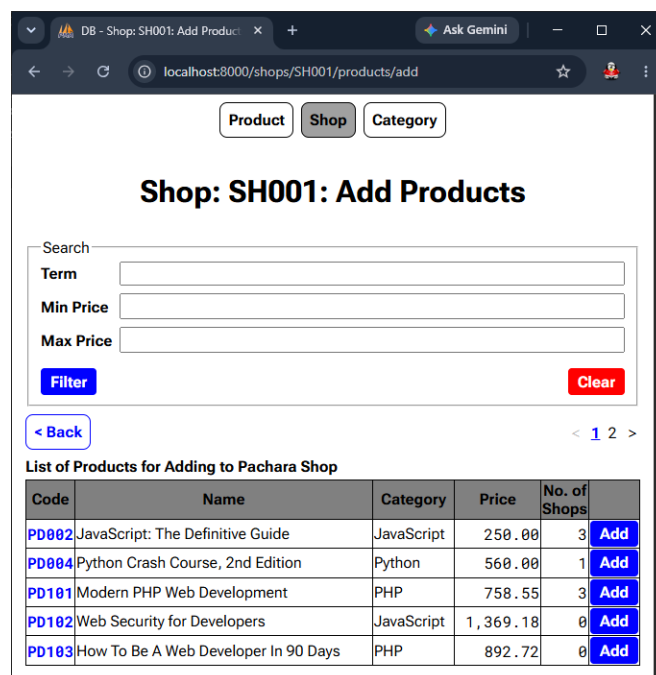

1. Update **ShopController** that has the same behavior as **ProductController**.

Don't forget to handle N+1 query problem.

Code	Name	Category	Price	No. of Shops	
PD001	Programming PHP	PHP	345.00	2	Remove
PD003	Learning PHP, MySQL & JavaScript	JavaScript	450.00	3	Remove

route **shops.view-products**

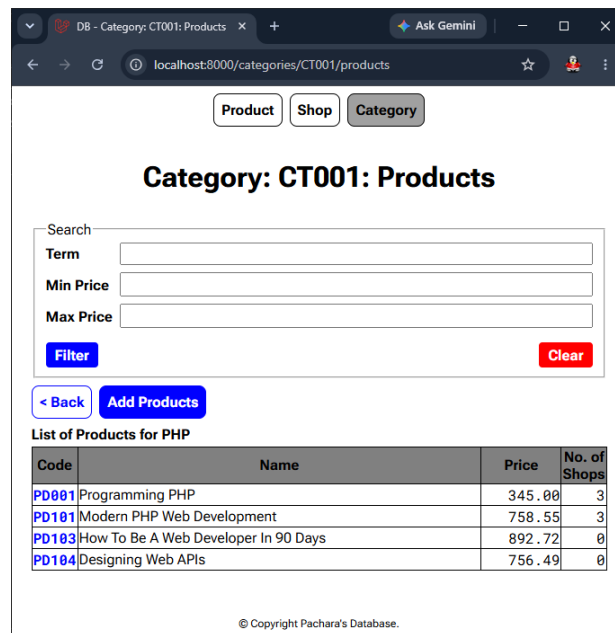

Code	Name	Category	Price	No. of Shops	
PD002	JavaScript: The Definitive Guide	JavaScript	250.00	3	Add
PD004	Python Crash Course, 2nd Edition	Python	560.00	1	Add
PD101	Modern PHP Web Development	PHP	758.55	3	Add
PD102	Web Security for Developers	JavaScript	1,369.18	0	Add
PD103	How To Be A Web Developer In 90 Days	PHP	892.72	0	Add

route **shops.add-products-form**

2. Update **CategoryController** that has the same behavior as **ProductController**.

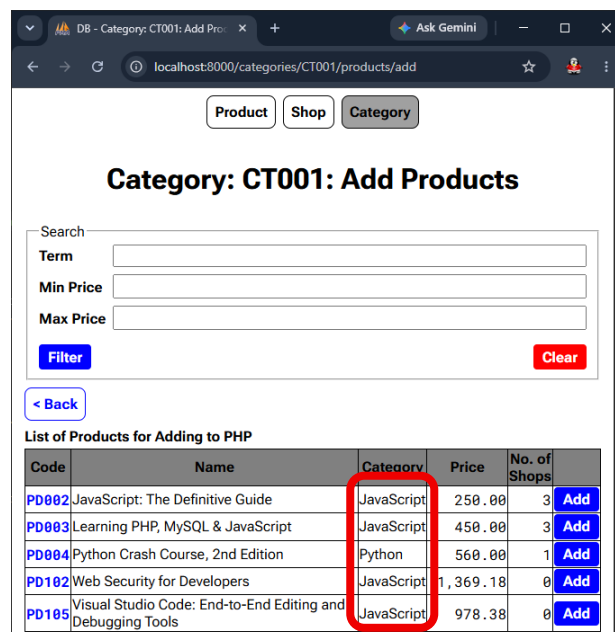

In route `categories.view-products`, no removing product link, we cannot remove product from category, but there is adding product to category that changes the category of product. Don't forget to handle N+1 query problem.

Code	Name	Price	No. of Shops
PD001	Programming PHP	345.00	3
PD101	Modern PHP Web Development	758.55	3
PD103	How To Be A Web Developer In 90 Days	892.72	0
PD104	Designing Web APIs	756.49	0

route `categories.view-products`

Route `categories.add-products-form` must show category without link.

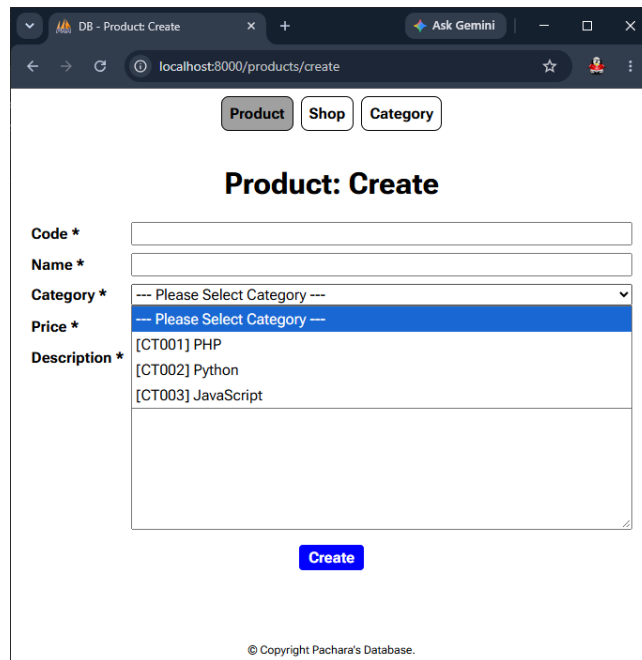

Code	Name	Category	Price	No. of Shops	Add
PD002	JavaScript: The Definitive Guide	JavaScript	250.00	3	Add
PD003	Learning PHP, MySQL & JavaScript	JavaScript	450.00	3	Add
PD004	Python Crash Course, 2nd Edition	Python	560.00	1	Add
PD102	Web Security for Developers	JavaScript	1,369.18	0	Add
PD105	Visual Studio Code: End-to-End Editing and Debugging Tools	JavaScript	978.38	0	Add

route `categories.add-products-form`

3. Update route `products.create-form`, `products.create`, `products.update-form` and `products.update` can specify category.

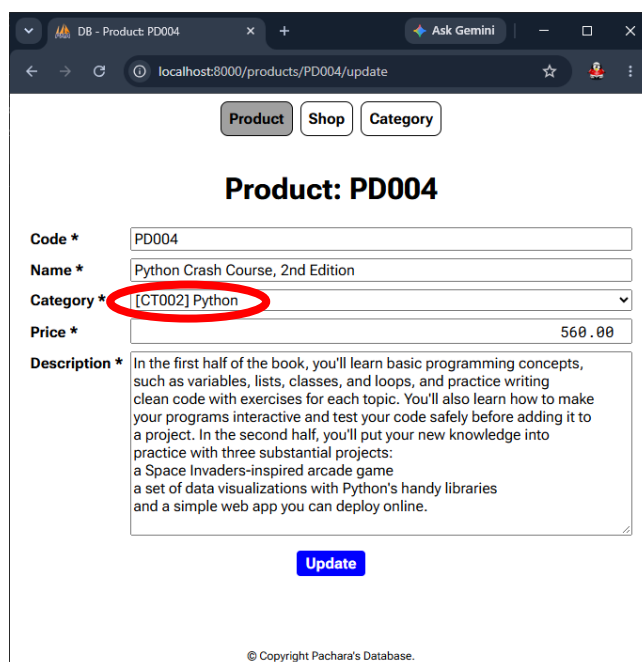

Route `products.create-form` has drop-down list of categories with **no default value**.

**** Don't use `category_id` directly. ****

route `products.create-form`

Be careful of updating, drop-down list **has to select the correct category** by default.

roue `products.update-form`

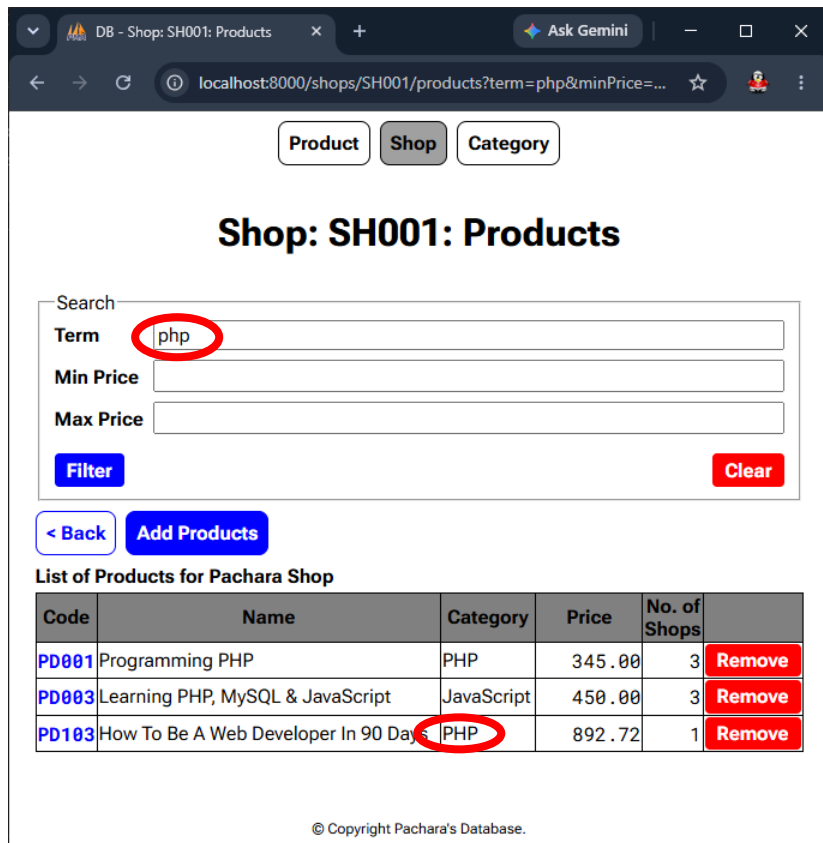

4. Update route `products.list`, `shops.view-products`, `shops.add-products-form` and `categories.add-products-form` to be searchable by category name.

**** Only `categories.view-products` cannot be searched by category name. ****

The screenshot shows a web browser window with the URL `localhost:8000/products?term=php&minPrice=&maxPrice=`. The page has a dark theme and a top navigation bar with a 'DB - Product: List' tab and an 'Ask Gemini' button. Below the navigation bar, there are three filter buttons: 'Product', 'Shop', and 'Category'. The main heading is 'Product: List'. Below this is a search form with three input fields: 'Term' (containing 'php'), 'Min Price', and 'Max Price'. There are 'Filter' and 'Clear' buttons. Below the search form is a 'Create Product' button. The main content area is titled 'List of Products' and contains a table with 5 columns: 'Code', 'Name', 'Category', 'Price', and 'No. of Shops'. The table lists 5 products, with the 'Category' column circled in red. The footer text is '© Copyright Pachara's Database.'
